

Restoration is the act of returning something to its original condition, which can apply to repairing buildings, renewing a damaged environment, or re-establishing a former status. The term also refers to dental work that replaces teeth, the re-establishment of the English monarchy in 1660, and a representation or reconstruction of something as it originally was.

Key aspects of restoration

- Physical renewal: Repairing and cleaning buildings, equipment, or other physical assets to their original state, often after damage from events like fire or flooding.
- Environmental recovery: Bringing a damaged natural environment, such as an area affected by mining, back to a healthy condition.
- Art and artifact repair: The process of carefully repairing and renovating items like paintings and statues to their original appearance.
- Restoring status: The act of returning something to a former position, rank, or state of health and vigor.
- Dental work: The replacement or restoration of missing or damaged teeth, such as with fillings, crowns, or dentures.
- Historical context: In English history, "The Restoration" refers specifically to the return of the monarchy with King Charles II in 1660.
- Reconstruction: A representation or reproduction showing how something, like a building or fossil, originally appeared.
